MVP

Home Screen
	Design a encapsulating home screen layout that is simple and intuitive to use

Search and Filter
	Be able to filter out search results based on the customers set preferences

Place Order
	Make a very simple view cart screen that is easy to understand

Delivery Map
	View the location and arrival time of their order. Maybe have user be able to land a pin on the exact location

Tracking Order
	Real time updates of the status of the order, as well as being able to call.

Recommendations
	Food Recommendations based on users set preferences

User Stories

As a user, I want a home screen that gives me a view of great options of food so that I can easily decide what to eat.
As a vegan, I want to filter my order so that I can see a list of vegan restaurants near me
As a user, I want to click on view cart and see my order clearly and concisely.
As a user, I want to View the location of the address I put in so that I can make sure it is correct.
As a front desk worker, I want the delivery boy to tell me who the order is from so that I can give it to the employee without problem.
